For an express-lane overview of our process and recommendations, see:

18 – 19: People we spoke with
46 – 51: Participants’ common needs
54 – 55: Next steps
We were struck by how students’ choices in 7th and 8th grades have real impacts on their future lives.
WHAT IS THIS DOCUMENT ABOUT?

The New York City Department of Education is the largest school district in the United States, with more than 1.1 million students and 1,800 schools. Each year over 75,000 students participate in a school-selection and application process to gain admission to the city’s public high schools.

The Public Policy Lab formed a partnership with the New York City Department of Education’s Office of Innovation and the Office of Student Enrollment to explore opportunities for improving the high school admissions experience. During the summer of 2013, we explored high school admissions through the insights of students, families, administrative staff, and policymakers.

Ultimately, we hope that the discovery process outlined in this document will inform the design of supports that assist students — particularly those from low-income and non-English-speaking families — in making more informed and confident decisions when applying to high school.
“The high school admissions process is centered on equity and choice. The student-driven process enables students to rank up to 12 programs in your order of preference. When filling out the high school application, you should consider each program’s Admissions Methods and Priorities. Admissions Methods are the processes schools use to consider applicants for each program. Examples of methods include Limited Unscreened (in which students receive priority based on their attendance at an information session) and Screened (in which students are ranked by a school based on their seventh grade grades, attendance, etc.). Admissions Priorities list the order in which applicants are considered for any given program. Examples of priorities include a student’s residence and information session attendance. You have the opportunity to choose from over 400 public high schools offering nearly 700 programs. Based on your preferences, interests, and academic needs, you can apply to the types of high schools and programs that suit you best.” – NYC DOE HIGH SCHOOL ENROLLMENT OVERVIEW
The high school admissions process is centered on two principles: equity and choice. When filling out the high school application, you should consider each program’s Admissions Method and Admissions Priorities. Admissions Methods are the processes schools use to consider applicants for each program. There are eight different methods, including Limited Unscreened (in which students receive priority based on their attendance at an information session) and Screened (in which students are ranked by a school based on their seventh grade grades, test scores, attendance, etc.). Admissions Priorities list the order in which applicants are considered for a program. You have the opportunity to choose from over 400 public high schools offering nearly 700 programs. Based on your preferences, interests, and academic needs, you can apply to the types of high schools and programs that suit you best.”

– NYC DOE HIGH SCHOOL ENROLLMENT OVERVIEW
80,000
8th graders evaluate public high school options.

74,000
Are matched to programs. (~6,000 opt out before the match.)

67,000
Are seated in schools. (~7,000 don’t enroll in a NYC public high school.)

MOVING THROUGH THE PROCESS

The choice model of admissions allows students to apply to a range of schools, rather than attending their nearest or zoned school. This model is intended to provide students with more educational options, incentivize schools to improve their offerings, and improve the school system at large.

The establishment of school choice in New York City under the Bloomberg administration has been the cornerstone of what many researchers describe as a decade of significant advancement in student achievement. Prior to 2004, there was little to no choice citywide; with few exceptions, the entire scholastic experience of New York City students was determined based on where they lived. That began to change when, starting in 2004, all 8th graders were required to choose a high school. This shift occurred simultaneous to the City’s efforts to develop hundreds of new high school options that offered diverse themes and opportunities.

The NYC Department of Education has made significant efforts to provide students and parents with training and information resources to help them evaluate school options. Each student may submit up to 12 school choices, then a data-driven algorithm maximizes the match between students’ preferences and their school placements. Today, over half of students receive their top-ranked school choice and three quarters receive one of their three top picks.

Given these high match percentages, the DOE believes that many families are satisfied with the outcomes of the high school admissions process. The agency also knows, however, that the choice experience can vary depending on students’ life contexts. Further, the value of students receiving a preferred choice depends on the assumption that students are making truly informed decisions about school selection.

Variability in the choice experience and of the components necessary for making informed choices are topics that our design team returned to repeatedly during our fieldwork, synthesis, and recommendations stages.

** See “The Demand for High School Programs in New York City,” Aaron M. Pallas and Carolyn Riehl, September 2007, for further discussion of decision-making and school choice.
## THE ADMISSIONS TIMELINE

### 7TH GRADE

### MAJOR MILESTONES
- Grades and attendance start counting toward high school admissions
- New York State Tests

### SPECIALIZED & SCREENED SCHOOL MILESTONES

### EVENTS FOR STUDENTS & FAMILIES
- Admissions workshops
- Workshops about specialized schools’ admissions, auditions, and assessments
- High school open houses begin
- Citywide high school fair
- Borough high school fairs
- Citywide Round 2 fair
- Round 2 school open houses/info sessions begin

### OUTREACH OR MATERIALS DISTRIBUTED
- High school directory
- High Schools at a Glance
- Specialized high school student handbook
- E-mail to parents about admissions
- Postcards mailed home about admissions workshops
- Directory translated

### SCHOOL/STAFF EVENTS AND MILESTONES
- Parent-teacher conferences
- Guidance counselor admissions process trainings

**8TH GRADE**

- Application deadline
- Application locked in
- Round 1 results released
- Round 2 deadline
- Round 2 results released
- Appeals deadline
- Appeal results released
- SHSAT and La Guardia Audition Registration
- Scheduling for screened school tests and auditions
- Fall SHSAT and La Guardia Audition Registration
- Release of SHSAT ticket and La Guardia audition ticket
- Fall SHSAT
- Screened school tests and auditions begin
- SHSAT for students with special needs
- SHSAT make-up (by permission only)
- La Guardia auditions
- Citywide high school fair
- Borough high school fairs
- High school open houses begin
- Citywide Round 2 fair
- Round 2 school open houses/info sessions begin
- Admissions workshops
- Workshops about specialized schools’ admissions, audits, and assessments
- Parent-teacher conferences

**9TH GRADE**

- Citywide Round 2 fair
- Round 2 school open houses/info sessions begin
- Parent-teacher conferences
- Parent-teacher conferences

(SPECIFIC DATES VARY ANNUALLY PER THE DOE CALENDAR)
“How invested you are in the process impacts where you end up in high school.”

— DOE POLICYMAKER
Informed choice is about more than information. It’s about engagement and meaning.

People’s experiences can be designed to be more engaging and meaningful.

FURTHER READING ON CHOICE EXPERIENCE AND OUTCOMES:
FOUR ARTICLES AND A BOOK

DESIGN PREMISES

Our work is premised on certain understandings about how people experience choice-making and how design can influence human experience:

- People don’t just need data to make choices – they need ways of evaluating options and relating those options to their own lived experience.

- As designers, we try to identify factors that make a process feel engaging and meaningful (or not). Then we can design ways to actively support more engagement and meaning during the evaluation stage.

- More engagement and meaning lead to more informed choices.

- More informed choices produce better outcomes.

We can change the conditions under which people evaluate choices to add or detract from their confidence, competence, and empowerment.
DISCOVERY GOALS

Our discovery work focused on how participants experience the high school admissions process. Specifically, our goals were 1) to understand challenges, as well as successes and satisfactions, in different participants’ admissions journeys, 2) to learn what resources people use to evaluate their options and where they expected or desired different supports, and 3) to generate concepts to guide subsequent design of new or improved tools, communications, or interactions.

We hoped to identify key participants, plot their issues, then target the most salient for design.
DISCOVERY PROCESS

Our discovery process was developed to align with goals we heard in preliminary discussions with the managers of the admissions process, the DOE’s Office of Student Enrollment: that we provide policymakers with news from participants in the process, that we deliver actionable recommendations, and that we either provide or propose methods for the implementation of those recommendations.
After introductory meetings with policymakers, we mapped the stakeholder ecosystem, noted areas to explore, and synthesized agency goals.
FIELDWORK

“Having choice is great; making the selection is not.”

To structure our fieldwork, we identified a wide range of stakeholders in the admissions process and narrowed in on those most intimately involved. We spoke with policymakers from the Office of Student Enrollment at the DOE’s headquarters and visited a borough enrollment office. We walked the halls at eight economically and racially diverse middle schools, where we talked with guidance counselors, parent coordinators, and 8th graders who were about to graduate. We also met with five families at home, to get a sense of how parents and children interact around admissions.

Our conversations centered on the needs, hopes, and reactions that people had throughout their experience with high school admissions. With families, we observed whether they entered the process early in 6th grade or came late to the process in 8th grade. To meet our goal of representing diverse voices, we met with students who had special needs, who were from English-language learning homes, and who came from low-income backgrounds. Ultimately we talked with more than four-dozen individuals across all five New York City boroughs.
“Twelve is too many. I tell my students not to put any high school on that application unless they’re absolutely sure they want to go there.”
– M.S. GUIDANCE COUNSELOR

We spoke with parent coordinators and guidance counselors at seven schools in Queens and Brooklyn.
To better understand how students felt about the admissions process, we used associative card games when meeting with 8th graders in Brooklyn and the Bronx.

“I think I put eight schools on the application. But I really only researched and knew about the first three.”
– 8TH GRADE STUDENT

“We visited 10 schools — that gave us a lot of good perspective.”
– MOTHER OF 8TH GRADER
**KID STORY: NOAH**

Noah is from a middle-income home on Staten Island and has an Individualized Educational Program (IEP). Noah’s parents are divorced, and from what he told us, the parental advice he received during the admissions process was sometimes contradictory. Noah’s dad acted as an involved project manager, but Noah believes he could have received better support from his guidance counselor, particularly around how he needed to perform academically in order to be eligible for the most selective schools. When Noah transitioned from a special education class to a general education class in 7th grade, his grades suffered; **neither he nor his father were** aware that his 7th grade performance could affect his high school choices. While Noah was not eligible to apply for the school he liked most, he was ultimately happy with his other choices and is looking forward to high school.

# Kid Story: Regina

Regina is a student from the South Bronx with an Individualized Educational Program (IEP), indicating that she's eligible for special education services. She told us that her parents weren’t really involved in the admissions process, and that she felt like she received limited help from her middle school guidance counselor. She picked schools that had dance programs, and she got into one of her choices. However, when her mom found out that the school was in the Bronx, she wouldn’t let Regina attend. Regina’s mom encouraged her to apply to charter schools, but she did not get into one. When we spoke to her, the day before her 8th grade graduation, she was anxiously trying to track down her guidance counselor to find out what she could do to find a high school to attend. She didn’t want to drop out.

Names of students, parents, and guidance counselors have been changed.

KID STORY: SASHA

Sasha lives in Bed-Stuy with her parents and two younger siblings in a middle-income home. Both Sasha and her mom placed a lot of importance in Sasha feeling confident about all of her school choices. Sasha’s mom hustled to get Sasha to auditions, open houses, and workshops; she described the admissions process as a full-time job. Sasha’s middle school guidance counselor was actively involved throughout the process, particularly early on. Sasha listed Beacon as her top choice, and didn’t get in; she did receive a seat at La Guardia, a specialized arts school that’s well-regarded and highly selective. Even still, she was so emotionally invested in her number-one choice that she found herself sobbing on results day.

Wishes she knew how students do in high school, both for relationships and for recommendations

**APPEAL RESULTS**

Students try to ask tutors, teachers
“The more your kid knows about herself, the easier it is to choose.”

– MOTHER OF 8TH GRADER
“It was too much information, too much to take in. It’s boring and I stopped trying to care about it.”

– 8th GRADER

After fieldwork, our team sorted through notes from over 50 hours of conversations, looking for key ideas.
“I’m worried about tomorrow. High school doesn’t figure in at all.”
– 8TH GRADER

We built a physical representation of the admissions timeline, to help ourselves understand the process.
We found that ideally there’s a loop of information and conversation flowing between students, parents, and counselors.
KEY PARTICIPANTS AND ROLES

Our conversations confirmed that (in the current process) the student, their family, and their guidance counselor are the key participants in evaluating options and making choices. We observed that the best decision-making processes are student-centered, with a family member and guidance counselor assisting a student with evaluation and school selection. In a student-centered process, each participant has a role:

- Students are the choice-drivers, applying to high schools based on their sense of who they are and what they want to become.

- Family members (usually a parent or grandparent, but sometimes a sibling, uncle, or cousin) serve as project managers, managing time and deadlines.

- Guidance counselors act as process navigators, leading both family and student through the requirements of the admissions system and creating pathways around obstacles.

“My daughter and I spoke to a lot of people. More than anything, we spoke to each other.”
– MOTHER OF 8TH GRADER

“How do I explain to these kids why they didn’t get into the schools they were qualified for? I don’t know how algorithms work.”
– M.S. GUIDANCE COUNSELOR

“You go to your friends for information about schools last. Your friends [are going to] change a lot of times.”
– 8TH GRADER
ROLE BALANCING

Optimally, all three key participants are engaged in carrying out a meaningful evaluation of a student’s school options. If paired with just a family member or a guidance counselor, a student can still experience a functional evaluation process, although both participants will carry a heavier load. However, our conversations suggested that if the student is left alone to evaluate their school options, they’re unlikely to make truly informed choices.

“We’re forced to rely on turnkey information. But we know that each family has different expectations and a different set of circumstances.”
– DOE STAFF MEMBER
Names of students, parents, and guidance counselors have been changed.
MANY CHOICE EXPERIENCES

We mapped the participant roles for each student we spoke with, turning up many different variations in how families, kids, and their guidance counselors engage in the process.

Participants struggled to find personal relevance amidst the superabundance of admissions deadlines and data.
Names of students, parents, and guidance counselors have been changed.
MANY CHOICE CONTEXTS

Individual choice processes are occurring in many different contexts. Some processes occur in environments with lots of supports and opportunity, some less so.
COMMON NEEDS

We identified four needs that all key participants share—things they require so that they can make meaningful choices for themselves or the children they guide. These needs apply equally to students, families, and guidance counselors, to low and high achieving participants, and to those with extensive resources (time, income, social capital, etc.) or limited resources.

1 Optimized Use of Available Time

3 First-Person School Experiences
Aspects of time, trustworthy personal experience, and emotional meaning surfaced repeatedly.

2
Clearer Visions of the Future

4
Balance of Facts and Feelings
The admissions process can seem overwhelming. Families and school staff reinforced the need for clear, simple tasks for each stage of the admissions process – so whether they begin thinking about high school when in 6th grade or never consider the process until 8th grade, they know what explicit steps to complete right now in order to have the best choosing experience.
It’s hard for anyone to imagine where or who they might want to be in four years. To make school choices with the best long-term outcomes, middle-school students (and the adults who guide them) need to visualize their high school or adult selves and the multiple possible futures that could await them.
To simplify the school evaluation process and make it feel more personally relevant, all families and middle school staff need access to first-person school tours, reports, or reviews – either through in-person visits or by hearing about other people’s direct personal experiences.
Choosing where to attend for the next four years requires a tricky calculus of rational assessment (of school performance, travel distance, a student’s admissions chances, etc.) and gut instinct (about ‘fit’ between school and student, social and cultural context, etc.). Families and staff need guidance around how to make good decisions that respect and balance both deliberative and emotional aspects of the process.
“I’d like it to feel more like an adventure – maybe it’s a little scary, but exciting.”

– DOE POLICYMAKER
Families need to have more than one top choice, so they're not so fixated on a single outcome.
NEXT STEPS

We used the needs identified during our fieldwork to create a series of prompts for design action, featured on the following pages. These prompts spring from the stories people told us. But they’re distilled and refined, with an eye to feasibility and relevance.

The prompts are ideas that we think should be explored through the mechanism of design. The prompts are intended to generate feasible responses — things that can actually be implemented for use by families, kids, and guidance counselors. What kinds of things? Communications, tools, or services — many of which can build upon or complement all the great work the DOE already does.

The DOE can engage with a variety of partners in designing around these prompts. Here we’ve specifically considered partnerships with technology developers, as well as with stakeholders directly through co-design processes.
Each prompt is designed to spark multiple responses — from apps and websites to communications and services.

Families need help managing the admissions process, so they can do a better job facilitating their kid’s choice.

Guidance counselors should stay with a group of kids through middle school, so they can offer more personalized high school recommendations.

Tweens should get help thinking about a future that is more than a week or two away, so they can make better long-term decisions.
Middle school guidance counselors want more feedback on how their students do and feel in high school, so they can better guide current students.

Kids with split families need additional support, so they can handle any conflicting advice about the process.

Families who are new to the process need more support, so the eldest kid doesn't have an especially bad experience.

Kids need a push to investigate schools outside their comfort zone, so they don't miss good options.

Families need information about seat availability, 12:1:1 enrollment, and details of admissions priorities, to be better advocates for their kids.

7th graders need to understand that they are already in the process, so they can adjust their behavior.
Middle school guidance counselors need to visit high schools in person, so they can tell their students about them.

Callers to P311 should get feedback, so they know their concern is being addressed.

Good schools in low-income areas need additional help with marketing, so they can overcome negative perceptions.

Families listen to multiple sources, so they need ways to sort truth from fiction.

Kids need first-hand experiences of high schools, so they can feel which are the right personal fit.

Kids need to process their admissions results in private, so they don't experience school outcomes in a stressful group context.
High school fairs should be more digestible, so they don't overwhelm and disappoint families.

Families need to consider the actual offerings of schools near them, so they don't dismiss a school just because of neighborhood biases.

Participants need a process that engages with their personal circumstances, so their humanity isn't 'disappeared' into data.

Families need to have more than one top choice, so they're not so fixated on a single outcome.

Kids need the process broken into small chunks, so they don't get bored, bogged down, or confused by the long timeline.

G.C.s and borough enrollment officers want stronger connections to each other and to Tweed, so they can feel in the loop.
Guidance counselors need more transparency and clarity around admissions priorities and placement, so they can better set expectations.

Participants should understand the admissions priorities better, so they can use their time to investigate relevant choices.

Kids and parents need to talk at home about choice priorities and deadlines, so parents can help kids handle the process.

Families need events with flexible hours, so they can attend without missing work.

Kids and parents need to grasp the process milestones so they can make the best use of the time left before the application is due.

Kids should get personalized default lists, so they can focus on likely schools – or explore overlooked options.
Kids should be guided on a process of self-discovery, so they can make school choices that enhance their inner selves.

Families need to imagine multiple positive future scenarios, so they don't get stuck on a single top choice.

Participants want sorting tools, so they can judge if schools match their preferences.

Guidance counselors need first-hand experiences of high schools, so they can feel which are the right fit for kids.

Guidance counselors need to understand kids' strengths and weaknesses, so they can make informed high school recommendations.

Kids need a consistent advisor throughout middle school, so they can get high school recommendations from someone they trust.
PROBLEM...
“I am a tween.”
“I am figuring myself out.”
“I procrastinate.”
“I don’t have too many informed support systems.”
“I think I get to choose whatever high school I want.”

I NEED TOOLS TO...
discover myself, understand and investigate my choices, use my time well and help me imagine my possible future, so I can select high schools that will fit me well socially and academically and prepare me for life as an engaged adult.

PROBLEM...
“We are new to New York.”
“I don’t have time to attend high school fairs.”
“My child’s guidance counselor is overwhelmed and doesn’t have time to help.”
“Every day my child’s interest changes.”
“There are so many choices I don’t know where to start.”

I NEED TOOLS TO...
help me keep track of important deadlines, know where my child is in the process, help her envision possible futures, find resources I can trust, and navigate the process so I can help my child select schools that will support her socially and academically.

PROBLEM...
“I’m new on my job.”
“I’m responsible for over 1,000 students.”
“I don’t understand how the process works.”
“I don’t know how things turn out for the kids I advise.”

I NEED TOOLS TO...
help me keep track of high-risk kids; experience schools first-hand, so I can help my students pick good choices; understand admissions methods and track open seats; know how my middle school students do in high school, so I can better advice my next class of kids.
SOFTWARE CHALLENGE

In the fall of 2013, building on the work described in this document, the Office of Innovation led six software developers through the first School Choice Design Challenge (SCDC) to create prototypes of new digital tools for enhancing the high school admissions experience.

The participating developers – all of whom had prior experience developing tools that assist with college-finding, comparison-shopping, data visualization, etc. – used their expertise to rapidly design and test a range of web and mobile applications that aim to improve the evaluation of high school options. Through eight weeks of participatory design research, panels, and user feedback sessions with students and families, SCDC startups deepened their understanding of the challenge, validated their ideas, and pivoted their products to enhance the choice experience. The challenge culminated in the presentation demo products from each developer.

A short film, commissioned by the Public Policy Lab and the Office of Innovation, describes the goals and outcomes of the user-centered design process and the School Choice Design Challenge.
CONVENTIONAL PROGRAM IMPLEMENTATION

ITERATIVE PROTOTYPING & EVALUATION
CO-DESIGN WITH STAKEHOLDERS

What do we mean when we say co-design? A conventional design process might start with a prompt inspired by user research, but development of a solution remains pretty hermetic until it’s complete, when the product or program is implemented with the people it’s meant to serve.

A co-design process is one in which the intended users of a service play a key and repeated role, participating in iterative prototyping and evaluation that helps to tailor responses to their actual needs.

We expect that this approach may give rise to variegated and locally adapted responses. We would recommend, nonetheless, that all responses – even those tailored to meet the needs of, say, English-language learners, or families going through the process the first time – should be designed to be fully accessible to all process participants, serving DOE’s commitment to equity.

We recommend that co-design labs be held with kids, families, and guidance counselors in their local schools, at community institutions, or at public DOE events, such as the high school fairs.
CONCEPTUAL RESPONSES
To suggest the kinds of tools, communications, and services that the design prompts might generate, we’ve taken a selection of the prompts and spit-balled a range of conceptual responses.
Families need events with flexible hours, so they can attend without missing work.

Kids need to process their results in private, so they don’t experience school outcomes in a stressful group context.
CONCEPTUAL RESPONSES

Tweens should get help thinking about a future more than a week or two away, so they can make better long-term decisions.
Families who are new to the process need more support, so the eldest kid doesn’t have an especially bad experience.

Kids and guidance counselors need first-hand experiences of high schools, so they can feel which are the right personal fit.
CONCEPTUAL RESPONSES

Participants want sorting tools, so they can judge if schools match their preferences

- okcupid-style matchmaking website with match and obstacle rankings
- directory as card deck
- print-on-demand mini-directories by theme

Middle-school guidance counselors need to visit high schools in person, so they can tell their students about them

- high school fairs just for guidance counselors
- school tours just for guidance counselors
- ms/hs guidance counselor mixers
Kids need the process broken into small chunks, so they don’t get bored or bogged down or confused by the long timeline.

Families need to be excited about more than one top choice, so they’re not so fixated on a single outcome.
Middle school guidance counselors want more feedback on how their students do in high school, so they can better guide current students.
Kids should get personalized default lists, so they can focus on likely schools – or explore overlooked options

Families need help managing the admissions process, so they can do a better job facilitating their kid’s choice

- Pre-filled application with choices based on student/school criteria
- List of reach, safety and wildcard schools for each student
- Netflix-style “you might like” recommendations
- Sample questions about visioning for parents to ask kids
- Mobile counseling lab for walk-in workshops
- Text alerts about process milestones
To make the most of our quick timeframe, we organized our work into half-day units.
PROJECT PHASING

This document represents the first phase of a user-centered design project – what we call “Discovery.”

User-centered design methods provide a means to understand peoples’ experiences and respond to them, in tangible ways. Our aim in this first phase was to learn how the school admissions process is being experienced by multiple stakeholders, then discover within those experiences the best opportunities for future design efforts.

Following a discovery phase, a typical next phase is “Design.” During this phase, the project team – policymakers, designers, and key service participants – work together to expand on the prompts identified in discovery. Typical design activities include further ideation, rapid prototyping, and testing, all carried out in multiple iterative cycles. The results of a design phase could include refined, production-ready prototypes and plans for pilot testing and evaluation.

During a final phase, “Implementation & Evaluation,” the agency takes the lead in rolling out pilots of the co-designed materials, while the design team provides design support and assistance with evaluation.
The team was fingerprinted and background-checked before being cleared to go into schools.
ABOUT THE TEAM

The Public Policy Lab is a 501(c)(3) nonprofit organization. We partner with government agencies and community members to create more accessible and meaningful service experiences. We use these design projects to engage with policymakers around systems for more accountable and citizen-centered service delivery. Finally, we carry out deliberate testing and improvement of our own innovation model and publish our success and failures, to accelerate the evolution of public service design nationwide.

In 2010, the New York City Department of Education launched the Innovation Zone (iZone), a dedicated Office of Innovation that supports personalizing learning and accelerating college and career readiness among students. iZone sources solutions from the best and brightest minds in and outside of the education community, enabling us to influence policy and practice across New York City and around the world.

With nearly 1,700 schools, New York City offers families more choices than any other public education system in the country. The Office of Student Enrollment (OSE) manages admissions, enrollment, and transfers for students in pre-kindergarten through grade 12. OSE’s mission is to increase access to high quality schools for all New York City students so that each student attends a school that prepares them for success in life.

CORE TEAM MEMBERS

PUBLIC POLICY LAB
Raj Kottamasu, Design Fellow
Chelsea Mauldin, Executive Director
Bridget Monahan, Research Fellow
Jennifer Rose, Design Director
Jaqueline Wallace, Strategy Fellow

INNOVATION ZONE
Kara Chesal, Strategist, Office of Innovation
Andrea Coleman, CEO, Office of Innovation
Steven Hodas, Executive Director, Innovate NYC Schools
Michelle Joseph, Strategist, Innovate NYC Schools

OFFICE OF STUDENT ENROLLMENT
Kathleen Brannigan, Chief of Staff
Allison Dunn, Director of Communications
Bryan Boyer, recently of the Helsinki Design Lab, visited us and provided feedback to the team.

Group work sessions took place at Public Policy Lab headquarters in Brooklyn and at DOE workspace in Manhattan (where we had at least one bike-room meeting).
SPECIAL THANKS

Our work on High School Admissions: Discovery for Design was possible only through the helpful contributions and generosity of many dozens of DOE staffers and New York City families. Any insights in the document come from their generously shared wisdom; all mistakes are the authors’ own.

NYC HIGH SCHOOL ADMISSIONS: UNDERSTANDING THE SCHOOL CHOICE EXPERIENCE

The Public Policy Lab formed a partnership with the New York City Department of Education’s Office of Innovation and the Office of Student Enrollment to explore opportunities for improving the high school admissions experience. During the summer of 2013, we explored high school admissions through the insights of students, families, administrative staff, and policymakers.

Ultimately, we hope that the discovery process outlined in this document will inform the design of supports that assist students — particularly those from low-income and non-English-speaking families — in making more informed and confident decisions when applying to high school.
